ANNALS OF THE ENTOMOLOGICAL SOCIETY OF AMERICA

Figure 1 illustrates the experimental setup. A subject is seated at a table, viewing a video screen. A video camera is positioned above the screen. A horizontal bar is placed between the subject and the screen. The screen displays a visual feedback system with a horizontal bar and a vertical bar. The vertical bar is labeled 'Vertical bar' and the horizontal bar is labeled 'Horizontal bar'. The subject is labeled 'Subject' and the video camera is labeled 'Video camera'.

Abstract

Abstract The purpose of this study was to determine whether there were differences in the prevalence of risk factors for coronary artery disease between men who had been exposed to asbestos and those who had not. A case-control study was conducted among men aged 60 years or older who had been employed in asbestos-related occupations before age 60. The cases were men who had died from coronary artery disease between 1978 and 1982. Controls were men who had died from causes other than coronary artery disease during the same period. Data were obtained from death certificates, medical records, and interviews with family members. The results showed that the prevalence of risk factors for coronary artery disease was higher among men who had been exposed to asbestos than among those who had not. This suggests that exposure to asbestos may be a risk factor for coronary artery disease.

Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section includes 'Pretest 1' (with 'Pretest 1a' and 'Pretest 1b' sub-sections) and 'Pretest 2'. The 'Main Experiment' section includes 'Main Experiment 1' and 'Main Experiment 2'. Each section contains a flowchart of the experimental procedure, starting from 'Introduction' and 'Practice' trials, followed by 'Block 1' and 'Block 2' of trials. The flowcharts show the sequence of trials and the timing of the 'Pretest' and 'Main Experiment' phases.

Sequence logo for the 5' region of the 18S rRNA gene. The y-axis represents information content in bits, ranging from 0.00 to 0.40. The x-axis shows positions from 1 to 100. The logo shows a strong consensus for 'GAGG' at positions 1-4, followed by a more variable region with some conserved motifs like 'GAG' at position 10 and 'GAG' at position 20.

The graph illustrates the projected increase in the percentage of the population aged 65 and over in various countries from 1950 to 2050. The Y-axis represents the percentage of the population aged 65 and over, ranging from 0 to 30. The X-axis represents the year, ranging from 1950 to 2050. The countries shown are Japan, Germany, United States, France, United Kingdom, Italy, Soviet Union, and China. Japan and Germany show the most significant increases, reaching over 30% by 2050. The United States and France also show significant increases, reaching around 25% by 2050. The United Kingdom and Italy show moderate increases, reaching around 20% by 2050. The Soviet Union and China show the least significant increases, reaching around 15% by 2050.
